## Industry or Classification Unit Information

| | |
|---|---|
| **Name of Industry or Classification Unit** | Motion Picture, Commercial, or Television Production – CU #763025 |
| **Description of typical work conducted in this Industry or Classification Unit** | This classification unit description provides an overview of the classification unit for general guidance only. Firms are classified based on this, our classification policies, Rate and Classification List, and other relevant classification unit descriptions. The items listed below are examples only; they are intended to be illustrative (not exhaustive). Every example may not apply to every firm in the classification unit.<br><br>Here are some examples of goods that firms in this classification unit produce:<br><br>• Commercials<br>• Educational programs<br>• Music videos<br>• Videos<br>• Documentaries<br>• Motion pictures<br>• Television programs<br>• Movies of the week<br><br>Here are some examples of facilities covered by this classification unit:<br><br>• Film sets (outdoors or indoors)<br>• Film studio<br><br>Firms in this classification unit may engage in additional activities that support their business undertaking. These activities include finance and administrative support and may also include:<br><br>• Casting<br>• Set decoration<br>• Set construction |

| | |
|---|---|
| | Here are some examples of equipment that firms in this classification unit use:<br><br>• Camera equipment<br>• Lighting equipment<br>• Electrical equipment<br>• Rigging equipment<br>• Special effects (pyrotechnics)<br><br>Here are some examples of key workers in this classification unit:<br><br>• Actor<br>• Camera operator<br>• Choreographer<br>• Director<br>• Grip<br>• Key Grip<br>• Gaffer<br>• Location manager<br>• Construction coordinator<br>• Musician<br>• Production assistant<br>• Production coordinator<br>• Set decorator<br>• Sound recorder<br>• Special effects person<br>• Stunt person<br>• Assistant director<br>• Carpenter<br>• Costumer<br>• Greens<br>• Make-up artist<br>• Producer<br>• Script supervisor<br>• Sound technician<br>• Stunt coordinator<br>• Video technician |

# Industry or Classification Unit Hazards

| |
|---|
| Does this industry or classification unit contain hazards relating to **confined space entry**? |
| Not a typical hazard for this industry. |
| Does this industry or classification unit contain hazards relating to **working from heights**? |
| Yes. Working from heights is usually conducted by riggers who set up the rigging for camera/lighting. Electricians also work on height to maintain the lighting. They usually use scissor lifts to get access to the beams of the studio. A boom lift is used for outdoor setting up. Much of the stunt work performed by actors involves planned falls from heights. Performance work (trapeze, balcony, platform, etc.) is often conducted at heights. Camera crews work at heights typically from powered elevating work platforms. |
| Does this industry or classification unit contain hazards relating to **machine safeguarding**? |
| Yes. The construction department uses a lot of woodworking machines. Table saws are the most common machines. Other common equipment are hand grinders, heated and hard wire cutting tools (cut Styrofoam) and drills. Much of the equipment used in set design and construction is typical of what is found in a traditional cabinet/carpentry shop. |
| Does this industry or classification unit contain hazards relating to **machine and equipment lockout**? |
| Yes. As mentioned earlier, woodworking machines need to be locked out. In addition, some tools such as foam cutting wires and paint sprays need to be locked out for maintenance. Lighting equipment (generators), compressors, mobile equipment all may require de-energization and lockout for maintenance purposes. |
| Does this industry or classification unit contain hazards requiring **respiratory programs**? |
| Yes. Work activities that generate significant airborne hazards include woodworking, spray painting, foam cutting and welding/fabricating. Sometimes significant amount of theatrical fog might be used in shooting which would require respiratory protection. |
| Does this industry or classification unit require **Exposure Control Plans (ECPs)**? |
| Yes. Activities that require ECPs include:<br><br>• Spraying painting (including adhesives)<br>• Using of crystalline silica-based surface dusting (to make the surface look old)<br>• Welding/Fabricating |

| |
|---|
| • Woodworking<br>• Carbon monoxide exposure control plan when there are sources of emission such as operating a vehicle inside the building |
| Does this industry or classification unit contain hazards relating to **mobile equipment and/or the requirement for roll-over protection (ROPs)**? |
| Yes. Most sites have forklift, either propane or electric. Other equipment include scissor lift, boom lift or vehicles (car or motorcycle) used for shooting. One particular vehicle worth paying special attention is the first aid truck where first air treatment is provided. The injured worker would be lifted up to the deck of the truck.<br><br>Other hazards include the loading/unloading of production equipment via the use of powered tailgates fitted to delivery trucks, and to ensure mobile equipment wheels are adequately chalked to prevent run-a-way vehicle hazard. |
| Does this industry or classification unit contain hazards of **musculoskeletal injuries (MSI)**? |
| Yes. Workers usually work 12 hour shift. A lot of job categories have higher MSI risk, such as camera, rigging and construction. The work involves large amounts of bending, twisting, lifting motions (i.e., camera cables, rigging materials, electrical equipment, etc.) |
| Does this industry or classification unit contain hazards of **working alone**? |
| While not a typical hazard there can be situations where a worker is required to work alone, such as security personnel during after hours, Location Assistants scouting new areas, workers travelling from one film location to another during their work shift, to name a few. |
| Does this industry or classification unit contain hazards relating to **contractor safety**? |
| Yes. Cleaning crew may be present on site. |
| Does this industry or classification unit contain hazards relating to **Toxic Process Gases**? |
| This is not a typical hazard for this classification unit unless crews are working/shooting in an area where toxic process gases may be present (e.g., ice arena, swimming pool, pulp/paper mill, etc.) |

| **Does this industry or classification unit contain other specific hazards not previously listed?** | |
|---|---|
| **Type of hazard** | **Description of hazard** |
| Stacking, storing, and housekeeping | The issues with hazards relating to stacking, storing, and housekeeping are unsafe stacking and storing of materials, overloading of racking crowding of work areas.<br><br>The yard of a film set may be crowded and a lot of construction materials may be stacked. Inside trucks you may see stacking materials too. |
| Racking | The issues with hazards relating to racking are unknown rated capacity, damaged racking, and mismatched components.<br><br>Racking may be used to store materials in the yard or inside trucks. |
| Trailers | The issues with hazards relating to trailers are no chocking/securement of trailer to prevent trailer creep, damaged trailers and “unzipping”, support of trailer to prevent upending.<br><br>This industry uses a lot trailers either parked near the set studio or outdoor shooting locations. |
| Safe access and egress on loading docks and throughout warehouse | Safe access and egress to/from the set building is an issue because it is usually crowded around the safe access/egress and the signs may not be obvious. |
| Pedestrian separation from mobile equipment | The issue with hazards relating to pedestrian separation from mobile equipment are unmarked walkways, and lack of coordination between mobile equipment and pedestrians<br><br>This could be inside the set building and in the yard. One need to be carefully looking for the marks as a pedestrian. |
| General lighting conditions | The issue with hazards relating to general lighting conditions are ensuring minimum standards are maintained and lack of emergency lighting.<br><br>The lighting for an active shooting stage can be very dim. |

# Prevention Officer Personal Safety While On-Site

| Does this industry or classification unit require specific **Personal Protective Equipment (PPE)** the Prevention Officer must don while they are on-site? |
|---|
| • High visibility apparel<br>• Safety footwear<br>• Additional PPE, if there are other specifically identified hazards, such as respirator and safety glasses |
| Does this industry or classification unit require the Prevention Officer to use **air monitoring equipment** while they are on-site? |
| Maybe. For certain hygiene hazard, such as fog and wood dust, air monitoring equipment may be used to understand the magnitude of exposures. |
| Does this industry or classification unit require the Prevention Officer to protect themselves against **dogs** while they are on-site? |
| Maybe. Some sets allow workers to bring pets to work; some sets use large animals. Do not touch any animals and always stay with your escort. Animals of all kinds may be present if required to be included in the filming activity. |

# Risk Assessment Process

| Does this industry or classification unit require a specific **Risk Assessment Process** the Prevention Officer must/should follow while they are conducting an inspection? |
|---|
| Yes. Before conducting an inspection, always find the site office and talk to the production manager first. Ask for a copy of the Call Sheet to assist in identifying the key personnel on site or responsible for worker safety. Understand what the show is about – such as if it involves explosives, animals, children, etc. Also assess what kinds of hazards could be present – if overhead operation is in place; if theatrical fog is used; if flammable adhesive is used; if a spray booth has been set up; if vehicles are operated inside the building; etc. The risk levels can be quite different based on the activities. Follow proper safe work procedures and use proper PPE if the hazards are present. Be alert for a sounding buzzer or flashing red light on set which indicates the cameras are rolling – during these times limit your conversation with workers (speak quietly or not at all) until the light is off. |

# Personal Protective Equipment (for Workers)

| Does this industry or classification unit require specific **Personal Protective Equipment** that the workers must don while they carry out their job functions? |
|---|
| • High visibility apparel (in the yard)<br>• Safety footwear<br>• Gloves (in construction)<br>• Safety glasses (in construction)<br>• Ty-vek suits and respirator (spray painting)<br>• Appropriate clothing<br>• Headgear (if working under overhead operations) |

# Regulations to Consider

| Hazard/Violation/Topic | Regulation Reference |
|---|---|
| Employer not providing adequate equipment, supplies, facilities, first aid attendants and services (including transportation). | Occupational Health and Safety Regulation (OHSR) Section 3.16(1), *Basic Requirements* |
| Employer has not provided the type and quantity of equipment, supplies, facilities, first aid attendants and services referred to in subsection 3.16(1) and Schedule 3-A. | OHSR Section 3.16(1.1), *Basic Requirements* |
| First aid assessment not conducted. | OHSR Section 3.16(2), *Basic Requirements* |
| First aid equipment, supplies and facilities are not being kept clean, dry, ready for use, and readily accessible at any time a worker works in the workplace. | OHSR Section 3.16(4), *Basic Requirements* |
| Lack of, and posting of, first aid procedures for providing first aid at a worksite. | OHSR Section 3.17, *First Aid Procedures* |
| Issues with maintaining, confidentiality, availability to WorkSafeBC officer, and disclosure of First Aid Records. | OHSR Section 3.19, *First Aid Records* |
| The employer has failed to ensure that a building or temporary or permanent structure in a workplace is capable of withstanding any stresses likely to be imposed on it. | OHSR Section 4.2, *Safe buildings and structures* |
| The employer has failed to ensure that each tool, machine and piece of equipment in the workplace is capable of safely performing the functions for which it is used. | OHSR Section 4.3(1), *Safe machinery and equipment* |
| An area accessible to workers requiring guards or guardrails does not have guards or guardrails installed. | OHSR Section 4.55(a), *Guardrail locations* |
| Stairway having more than 4 risers and does not have compliant handrails. | OHSR Section 4.62, *Hands on stairways* |

| Hazard/Violation/Topic | Regulation Reference |
|---|---|
| The employer has acquired a hazardous product for use, handling or storage at a workplace and has not obtained a supplier SDS in respect of that hazardous product that complies with the requirements of the Hazardous Products Regulations. | OHS Section 5.14, *Supplier SDS* |
| A worker was observed not wearing compliant safety headgear in a work area where there is a danger of head injury from falling, flying or thrown objects, or other harmful contacts. | OHSR Section 8.11, *General requirement (*safety headgear) |
| A worker who is handling or exposed to materials which are likely to injure or irritate the eyes, is not wearing compliant and appropriate safety eyewear. | OHSR Section 8.14, *Safety eyewear* |
| A worker's footwear is not appropriate, or of a design, construction, and material appropriate to the protection required. | OHSR Section 8.22, *General requirement* |
| A worker required to wear a respirator which requires an effective seal with the face for proper functioning was observed not clean shaven where the respirator seals with the face. | OHSR Section 8.39(2), *Face seal* |
| Issues relating to respirator fit testing. | OHSR Section 8.40, *Fit tests* |
| The employer has not ensured that a fall protection system has been used when work is being done at a place from which a fall of 3 m (10 ft.) or more may occur, or of less than 3 m involves a risk of injury greater than the risk of injury from the impact on a flat surface. | OHSR Section 11.2(1), *Obligation to use fall protection* |
| The employer has not ensured that machinery and equipment is fitted with adequate safeguards which protect a worker from contact with hazardous power transmission parts, ensure that a worker cannot access a hazardous point of operation, and/or safely contain any material ejected by the work process which could be hazardous to a worker. | OHSR Section 12.2, *Safeguarding requirement* |
| The employer has not ensured that effective local exhaust ventilation is being used at any fixed work station to minimize worker exposure to harmful air contaminants produced by welding, burning or soldering. | OHSR Section 12.114, *Ventilation* |

| Hazard/Violation/Topic | Regulation Reference |
|---|---|
| The employer has not ensured that a person operating mobile equipment has received adequate instruction in the safe use of the equipment. | OHSR Section 16.4(1)(a), *Competency of operators* |
| The operator and passengers are not using the belts on mobile equipment having seat belts required by a law in British Columbia when the equipment is in motion, or engaged in an operation which could cause the equipment to become unstable. | OHSR Section 16.33, *Use*<br><br>OHSR Section 4.3(1)(b)(i), *Safe machinery and equipment*<br><br>OHSR Section 16.32(1), *Provision*<br><br>OHSR Section 16.7(d), *Standards*<br><br>OHSR Section 16.7(e), *Standards* |
| A traffic control person was not provided with or did not use the required equipment, communication, or personal protective equipment. | OHSR Section 18.9, *Operations during day time* |
| The owner of a building has not provide the production workers with a healthy and safe work environment. For example, significant dust residues from previous shows or previous tenants. | *Workers Compensation Act* Section 25, *General duties of owner* |
| A Joint Occupational Health and Safety Committee has not been set up or properly maintained. Sometimes workers may not be represented – the JOHSC only consists of department heads. | WCA Section 31, *When a joint committee is required* |
| A lot of film chemical and biological hazards are unique to this industry. You may have not encountered them before. Use this section to ask the employer to provide adequate information and safe work procedures. | OHSR Section 5.2, *General information requirement* |
| Sometimes the employer may not realize the products they use contain designated substances. Use this section to require the employer to substitute or develop an ECP. | OHSR Section 5.57, *Designated substances* |

| Hazard/Violation/Topic | Regulation Reference |
|---|---|
| An employer has failed to investigate and assess the potential for exposure in the case of a worker who has exhibited signs or reports symptoms of overexposure to a hazardous substance present in the workplace. | OHSR Section 5.59(1), *Investigating symptoms* |
| An assessment has demonstrated that the signs or symptoms exhibited by a worker can be caused by exposure to a hazardous substance present in the workplace, and further investigation has not been conducted, or has not been conducted in consultation with the joint committee, or worker health and safety representative, to address and resolve the worker's concern. | OHSR Section 5.59(2), *Investigating symptoms* |
| Records of the investigation of the signs or symptoms exhibited by a worker, which could be caused by exposure to a hazardous substance present in the workplace, have not been made available to workers, or have not been maintained by the employer for a minimum of 10 years. | OHSR Section 5.59(3), *Investigating symptoms* |
